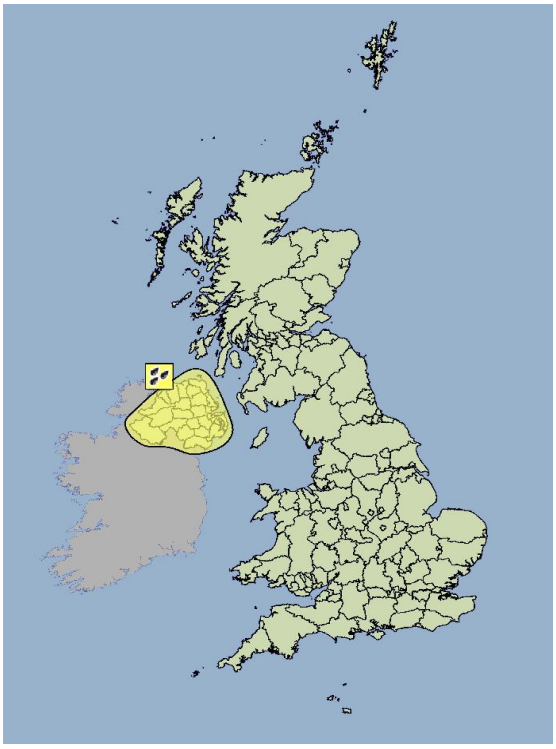
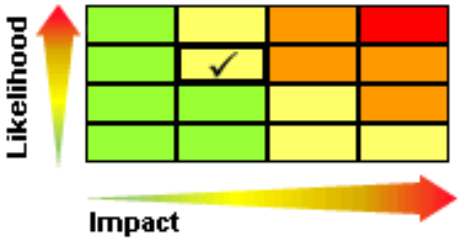
National Severe Weather Warning Service





Chief Forecasters Assessment
An active weather system will introduce milder air from the west across Northern Ireland. 10-20 mm of rain is likely quite widely with locally 25 mm possible. This is likely to assist thawing of lying snow, increasing the risk of impacts from localised surface water flooding. This is most likely in northern and western counties where there is most snow lying.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **04:00 on Sun, 21st Jan 2018** until **15:00 on Sun, 21st Jan 2018**

Spells of heavy rain are likely on Sunday, which combined with thawing of lying snow, may lead to localised surface water flooding, especially in northern and western counties.
Spray and localised flooding on roads probably making journey times longer
Bus and train services may be affected with journey times taking longer.
